1 Overview

1.1 Background

Teams juggle Markdown notes, Office documents, PDFs, images, mind maps, audio and video every day. Switching between apps breaks focus and scatters information.

EasyView_Md puts **editing** and **preview** in one window: WYSIWYG Markdown, and one-click viewing for everything else, with no extra software to install.

1.2 Who It Is For

- **Product managers**: write requirements and review design material.
- **Engineers**: maintain technical docs and Cursor rules (`.mdc`).
- **Project managers**: check schedules, meeting notes and decks.

1.3 Editions

Edition	Runs on	Best for
Desktop	macOS / Windows	Managing a local document library
Extension	VS Code / Cursor	Editing and previewing inside the IDE

2 Key Features

2.1 Markdown Editing

Headings, lists, tables, code blocks, math, front matter and image paste. Pasted images are saved to a `.assets` folder named after the document and cleaned up when no longer referenced.

> “Focus on the content; let the editor handle the formatting.”

2.2 Multi-format Preview

Category	Formats	Highlights
Documents	docx, doc, pdf, epub	Outline, search, print
Spreadsheets	xlsx, xls, csv, tsv	Sheets, zoom, search
Presentations	pptx, ppt	Thumbnails, slideshow
Images	png, jpg, heic, tiff, svg	Zoom, rotate, download
Design	xmind, drawio, psd	Mind maps and diagrams
Media	mp4, mp3, wav, flac	Playback, seeking, live spectrum

2.3 Version Timeline

Every save creates a local history entry, merged with Git commits in the timeline. Compare any two versions or restore one with a click.

1. Select a file in the explorer;
2. pick a version in the timeline;
3. view the diff or restore it.

3 Architecture

3.1 Layers

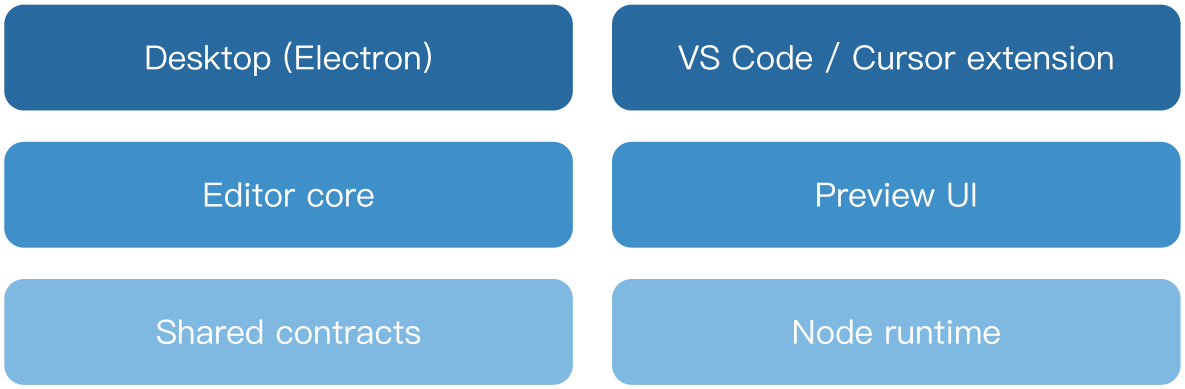

Figure 1. Both hosts share the same editor and preview components

3.2 Preview Routing

Every host uses one routing table to decide which viewer opens a file:

```
export function resolvePreviewRoute(fileName: string) {
  const name = fileName.trim().toLowerCase();
  return ROUTES_BY_LONGEST_SUFFIX
    .find(({ suffix }) => name.endsWith(suffix))
    ?.definition ?? null;
}
```

4 Quality and Performance

4.1 Time to Open

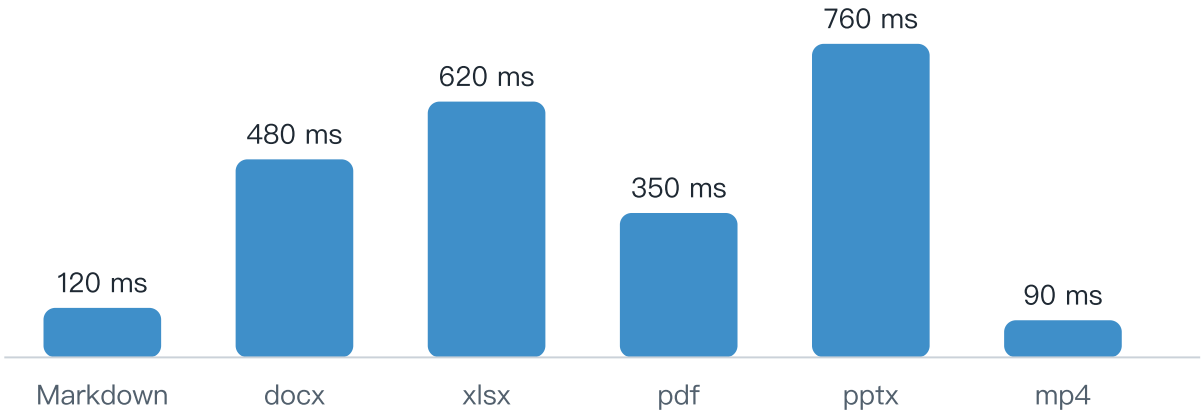

Figure 2. Time to first render by format (sample data, milliseconds)

4.2 Test Layers

Layer	Scope	Runs
Unit tests	900+ cases	Every commit
End–to–end	Real desktop app and extension	Every commit
Release gate	Both layers green before release	On tag

5 Roadmap

5.1 Milestones

Phase	Scope	Planned	Status
M1	Markdown editor	2026 Q1	Done
M2	Multi-format preview	2026 Q2	Done
M3	Audio and video	2026 Q4	In progress
M4	Shared annotations	2027 Q1	Planned

5.2 Inspiration

Appendix A Glossary

A.1 Terms

Front matter

Metadata at the top of a Markdown file, wrapped in `---`.

MDC

Cursor's rule file format: Markdown with front matter.

Outline

PDF bookmarks shown in a reader's sidebar for jumping between sections.
